Description

Documentation for the various application options does not match the invocation explained on the wiki page for the Application.

Documented need to be:

- add: to add projects (args: name, router)
- remove: to remove a project from the list (arg: name)
- list: listing projects that have been added (no arg)

- start|stop|restart: to directly control registered routers
- genconf: apache config generator
- init: project initialization
