Target version:			Spent time:	0.00 hour

Description

We should add various decorators to the default setup.

- xsrfcheck
    - Checks if the invalid_xsrf flag has not been raised
- haspost
    - Checks if post fields are available
- isloggedin
    - Checks to see if there is a valid uweb login session available.

These should return various stub functions which raise NotImplementedErrors untill the user overwrites them.
