Description

The name for this key should default to the table name + ID.

This means that a record class Author(VersionedRecord) by default will have a record key authorID. If the developer provides another table name (for instance 'writer'), then the record key should change accordingly (in this case: writerID).

Associated revisions

Revision 286:2f239384878f - 2012-08-22 15:13 - Elmer de Looff

Expanded test suite for the database model significantly. Changed behaviour of VersionedRecord's key such that the default is the local table name + ID. Defining _RECORD_KEY overrides this behavior (tests have been added to verify this). This resolves #926.

History
